# Strengthening Community Health Systems

## Health worker performance management

- Take action based on real-time health worker performance indicators
- View performance of health workers compared to goals, peers, and previous time period

## Health system performance management

- View trends for your health system for key activity and impact indicators
- Take action with a real-time view of speed, quantity, coverage, and equity achieved by the system

## Outbreak surveillance

- Track priority illnesses with a symptom-driven approach
- Integrate death surveillance into service delivery workflows
- Build case definitions and alerts using service delivery and screening information

## Communication

- Send and receive messages with community health workers and other community leaders
